

Roses for Hot, Dry Climates

Miniature and Minifloras: These are small-scale versions of hybrid teas and floribundas in flower, form, and foliage. The difference is in the size of the flower, not necessarily the size of the plant. Miniatures range in bloom size from less than 1 to 2 inches in diameter. The miniflora flowers are 2 to 3 inches in diameter and considered intermediate in bloom size and foliage, falling between miniatures and floribundas. Both bush classifications range in height from 1 to 20 feet tall. These plants are often grown on their own roots, are considered easy to cultivate and hardier than either hybrid teas or floribundas. Their versatility makes them excellent candidates for ground covers, containers, massing, edging, hedges, and rockeries.
